Introduction

What does it do?

Hype Error extends the domain record to define an error page for 404 errors. The page will be shown if a non-existing page is called. Additionally notifications can be configured to be sent, if the 404 error page is called. There's also a simple frontend plugin which can be inserted in the 404 error page to display an appropriate message to the user.

Screenshots

Users manual

Open a domain record, define an error page and save it. On the error page you can define custom content and/or add the frontend plugin which shows a simple error message to the user.

Administration

Installation

1. Import and install the extension.
2. Adapt the configuration to your needs.

Configuration

Configuration is done completely via the extension manager. TypoScript configuration is not yet available. All settings apply to all domains of the TYPO3 instance.

Extension configuration

Property:	Data type:	Description:	Default:
logErrors	boolean	Enable logging of 404 errors.	1
logWithReferrerOnly	boolean	Only log 404 errors for requests containing a referrer.	1
